Ensemble, prenons le cancer de vitesse.

To whom it may concern,

I had the pleasure of welcoming Dalila Zerourou for her five-month M2 master's internship in the CurieCoreTech Metabolomics and Lipidomics platform at the Institut Curie. Throughout her time with us, Dalila consistently demonstrated exceptional motivation and a high level of maturity for this stage of her training.

During her internship, Dalila worked on establishing a pipeline for lipidomic data processing and visualization. This project required a deep understanding of the structure of complex shotgun-lipidomics datasets, as well as the ability to think critically and propose a coherent rationale for compiling data into intuitive visual outputs. Dalila showed remarkable autonomy and technical insight, quickly proposing a robust framework with minimal supervision, particularly impressive given that bioinformatics is not the core expertise of our team. Thanks to her work, we now have a functional lipidomics visualization tool, and she is currently finalizing a data-processing pipeline that expands the structural information extractable from lipidomics experiments.

Beyond her technical strengths, she communicates clearly, collaborates respectfully with colleagues, and approaches her work with professionalism and enthusiasm. While her English proficiency is still developing—which may pose challenges in highly international environments—she compensates with a positive attitude, and a willingness to improve.

I am confident that Dalila will excel in any French-speaking professional or academic environment, and I fully support her candidacy.

Sincerely,

Julio Lopes Sampaio
